**DETAILED ACTION**

***Allowable Subject Matter***

1. The indicated allowability of claims 25-29 is withdrawn in view of the newly discovered reference(s) to Lampert et al. Rejections based on the newly cited reference(s) follow.

***Claim Rejections - 35 USC § 103***

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

4. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.

2. Ascertaining the differences between the prior art and the claims at issue.
  3. Resolving the level of ordinary skill in the pertinent art.
  4. Considering objective evidence present in the application indicating obviousness or nonobviousness.
5. Claims 1-10, 12-14, 17, 20, 22, 24-29, 39, 41-45 and 50-52 are rejected under 35 U.S.C. 103(a) as being unpatentable over Yoshitani et al (US Patent NO 5,975,098) in view of Lampert et al (US Patent NO 5,181,985).

Yoshitani et al teach a method as claimed except for the use of ozone and other gasses and the use of heated liquids. See entire document, especially Figures 1, 3, 10, 11, 12, 14, 18 and 22 and the related description.

Lampert et al teach that introduction of ozone and the other claimed chemicals into liquid sprays and the use of the heated liquids was known to improve cleaning. See entire document, especially Summary of the Invention.

It would have been obvious to an ordinary artisan at the time the invention was made to incorporate the use of ozone and other chemicals disclosed by Lampert et al and to use heated liquids in the method of Yoshitani et al with reasonable expectation of success in order to enhance cleaning because Lampert et al teach that such improves cleaning results.

As to claim 12, which requires irradiating the work piece with UV, infrared, microwave, gamma or x-ray radiation:

It is noted that the claim does not require irradiation during application of the liquids. The examiner's position is that the claimed radiations are conventionally used in the semiconductor industry for variety of applications such as cleaning, etching, coating, lithography, etc. It would have been obvious to an ordinary skill

in the art that the semiconductor substrate would be subjected to the recited radiations at least at some point of the manufacturing process.

***Response to Arguments***

6. Applicant's arguments, filed 1/29/08, with respect to the rejection(s) of claim(s) under 35 USC 112(1) have been fully considered and are persuasive. Therefore, the rejection has been withdrawn. However, upon further consideration, a new ground(s) of rejection is made in view of newly discovered prior art.
